Flexible Cloud Backup

Key Benefits

- Implement a new managed IT data protection strategy
- Protect every piece of your IT infrastructure with one solution – physical and virtual; Windows® and Linux® servers; databases and applications
- Ensure data protection and eliminate the risk of losing data
- Select the size of backup storage you need today and easily get additional space as your infrastructure grows
- Eradicate the costs associated with tapes and cumbersome tape rotation
- Reduce risks with proven, quick, bare-metal recovery

Leaseweb Acronis Backup, provides safe, secure and scalable data protection, and cloud backup of any data, anywhere, anytime.

Leaseweb Acronis Backup is a fast, scalable and reliable backup solution for files, applications, and complete systems. By partnering with one of the leading names in backup solutions we have made it easy to incorporate cloud data protection into your infrastructure setup, giving you the peace of mind to focus on your core business while knowing that your data is safe and secure.

Why Do You Need Cloud Backup?

- To protect your data in the event of any disaster
- To quickly and easily implement a data protection strategy
- To replace tape and other legacy backup solutions

Why Choose Acronis Backup?

- **Easy to manage:** Stress-free backup management that is easy to deploy and scale through a single intuitive web-based console.
- **Safe:** Your data is encrypted both in transit and at rest and is secured in SSAE-16 certified global data centers.
- **Comprehensive:** LeaseWeb provides a complete solution for all of your IT infrastructure and data protection with simple and transparent pricing.

Leaseweb Acronis Backup: Packed with Features

Backup and recovery

- Flexible and scalable cloud backup
- Disk image file-based backup
- Off-site backup to the Cloud
- Recovery of any platform from cloud or dedicated servers
- Backup and recovery of selected files, folders, volumes, or a complete system
- Backup of Windows® and Linux® servers
- Backup of Microsoft SQL Server®, Exchange, SharePoint® and Active Directory®
- Granular object-level recovery for Microsoft Exchange and SharePoint databases
- Incremental and differential backups, and deduplication and compression
- Disk-to-disk-to-cloud backup staging support
- Acronis application-aware restore provides database-level recovery of Microsoft® Exchange, Microsoft SQL Server® and System State backup
- Active Restore permits users to start working before a restore is complete by copying only the files they need

Monitoring

- Use a single console to protect all your data wherever it is stored
- Customize backup and retention policies to suit your business and IT needs
- Customer self-service backup monitor to control backups
- Customer centralized views of activities and alerts

Security

- SSAE-16 certified data centers
- 2048-bit SSL management channel encryption
- AES-256 data encryption in transit and at rest
- Increased security with network based login restrictions
