

LEASEWEB MULTI-CDN

How to improve your user experience and content quality

We know that uptime, reliability, and speed are important for your business, in order to deliver high quality content and the best user experience. The Leaseweb Multi-CDN combines multiple Content Delivery Network (CDN) providers to increase your global reach.

How does it work?

Leaseweb uses an optimized strategy that leverages performance metrics in the decision-making process. This means that the CDN chosen is the “best” performing CDN, which has received the highest score across several metrics. We analyze the recent measurement of QoE metrics within a specific region, for a specific piece of content, considering the ISP and device of the end-user intending to access the content. The metrics we use come from different suppliers, and the platform is built to be agnostic for this.

The Leaseweb Multi-CDN portal enables you to configure all the extensive features needed to optimize content distribution. As such, Leaseweb Multi-CDN truly empowers you to create the best experience for your customers.

What we offer

1. Advanced Self-Service Portal

Configure all the extensive features needed to optimize content distribution through seamless CDN integration.

2. Unified Reporting

All key metrics are aggregated and presented standardized across the CDNs.

3. More Coverage

Access 300+ PoPs across the globe, including Europe, US, South America, the Middle East, Africa, India, China, Russia and Australia.

4. Unmatched Capacity

Any spike can be handled using 9 Global CDNs, including P2P.

5. 24/7 Support

Personal support during business hours plus an always available Knowledge Base.

Our Multi-CDN product range

LSW Delivery

Built to deliver high volumes in a cost-effective way.

LSW Delivery uses the Leaseweb CDN with caches deployed within Leaseweb data centers, using our own capacity.

Multi Delivery Volume

Built to switch on latency in a cost-effective way.

For delivery of high volumes at a reasonable cost, using a selected number of connected CDNs.

Multi Delivery Premium

Built to switch on high performance and high availability.

Next to latency, we will also factor in quality of experience metrics.

Multi Delivery makes use of a larger set of connected CDNs with premium delivery in all regions.

Features

CDN Resources

- Geo-control capabilities
- Compatibility with all leading media players and formats

Reporting and Analytics

- Unified reporting across CDNs
- Easy-to-use platform to discover trends
- Real-time analytics
- Raw logs
