

CLOUD

# Your cloud should be unique, like you

## Stay in control

LeaseWeb takes a zero-tolerance approach to cybercrime. Our resilient security portfolio protects you from the biggest and most sophisticated cyber attacks using virtual networking, firewalls, special services implemented for your individual needs and more. You also have the reassurance of our crack team of security experts working 24/7 to keep you safe.

*LeaseWeb Cloud is your cloud, your way. You get world-class solutions tailored to your needs and delivered on a world-class platform – for everything from small websites to global-scale enterprises. We'll help you shape your ideal cloud and take care of your infrastructure. So you keep a laser-like focus on your core business.*

## **Virtual Servers: the cost-conscious choice**

Virtual Servers are smart for small to medium workloads. They minimize your cloud expenditure and let you tailor the package to your needs. You get your own portal and free firewall – plus the reassurance of using leading-brand hardware, a fully redundant platform and the massive bandwidth of our state-of-the-art network.

## **Private Cloud: the fully customizable option**

Private Cloud is ideal for any workload – simple websites, multinational activity, software development, dynamic transcoding... You name it. Literally, you name it – because you choose your compute, memory, network and storage packs. We combine them into a dedicated pool of resources in your own private cloud space. Apache CloudStack, VMware and Microsoft Azure capability lets you fine-tune your cloud to perfection.

## **Hybrid Cloud: the mix and match solution**

Hybrid Cloud is great when you need only certain cloud features – say scalability or for transitioning between set-ups. It can mix the best of dedicated servers, and different clouds. Put different parts of your workload where they work best. Enjoy the security of a single-tenant server with the scalability of the cloud. That's how Hybrid Cloud maximizes efficiency, revenue and security.

# Cloud: shape yours to suit your business

## Virtual Servers

- Small to medium workloads
- Low expenditure
- Flat-fee pricing
- Highly scalable
- Customer portal

## Private Cloud

- Highly adaptable and cost-efficient
- Scale instantly up or down
- Dedicated resources
- Suitable for all workloads
- Flexible billing
- Complete control over resources

## Hybrid Cloud

- Flexibility of cloud features
- Instantly scalable for demand surges
- No costly on-site hardware
- Efficient workload allocation

## We don't compromise so you never have to

### Complete reassurance

You're in expert hands with LeaseWeb. We were among the first pioneers of cloud services and our 20 years of experience help keep us at the forefront of the industry. So you can rely on our talented team of cloud experts to create the best possible solution for your business. Personalized service backed by unique know-how: that's why 17,500 customers place their trust in LeaseWeb. Our fully redundant infrastructure ensures super-reliable performance at all times. And it's kept in prime condition by vigilant teams of specialists.

### Grow your business, anywhere in the world

Our state-of-the-art, high-capacity global infrastructure lets you carry out services – and grow your business – anywhere in the world. Top-tier ISO certified data centers are located at strategic locations to guarantee you prime access to major business areas in Europe, the US and Asia. We use servers from only leading brands, such as Dell, HP, Huawei and Supermicro. So if you're looking for a partner to help maximize your growth, you can count on LeaseWeb to deliver.

### Freedom

LeaseWeb Cloud lets you manage everything via your own powerful portal and API. You get access to stacks of features and functions, including server reboots, remote console and rescue modes, advanced firewall management and virtual networking. So you can do what you like, the way you like it.

### Cost-efficient automation

Our platform is highly automated. This lets you work efficiently and independently with minimal support costs.

### Which cloud do I need?

There are three types of cloud available from LeaseWeb: Virtual Servers for modest workloads, Private Cloud for workloads that demand dedicated resources, and hybrid cloud, which offers a flexible mix of both private cloud and dedicated servers..
