Benefits:

1. Increased uptime through monitoring, automated back-ups, and LeaseWeb-initiated incident resolution.

2. Reduced burden of monitoring, fixing outages, and changing equipment for your own IT staff.

3. Predictable service costs with a fixed monthly fee per device.

To enjoy these benefits simply select the Networking Management Pack in combination with your network equipment. LeaseWeb will do the monitoring, and will automatically respond to ongoing needs according to your chosen SLA.

What we will do:

- **Daily configuration back-up** – We create a new configuration backup everyday, allowing you to easily roll back to a previous configuration if the need arises.
- **Incident monitoring and resolution** – We will monitor your dedicated network equipment 24 hours a day and alert the LeaseWeb operations staff in the event of an incident. All incidents will be analyzed and resolved by our experienced team.
- **Incident logging** – We record, track, and analyze every incident on an ongoing basis, providing actionable insight on network equipment issues.
- **Configuration changes** – Anytime you need changes to your configuration we can execute them for you as Advanced Support tasks*.

* incident response times and Advanced Support rates are determined by your chosen SLA
